

# 28mm BladeSaver Thread Cutter Assembly Instructions

Below is a diagram showing the parts of the **28mm BladeSaver Thread Cutter and Case**:

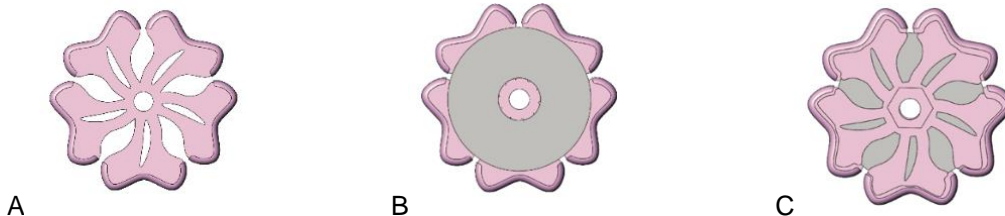

You will need the following before you begin assembly:

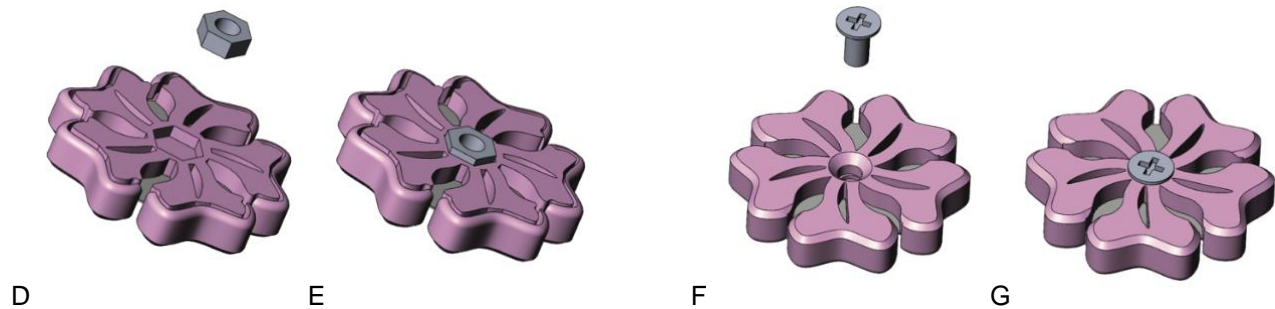

- #2 Phillips head screwdriver
- Used 28mm rotary blade

## To assemble the **Blade Holder**:

1. Put the **blade holder bottom** on a flat surface (Figure A) and carefully place a used 28mm rotary blade into the **blade holder bottom**, (Figure B). Note, the center has been designed for use with any 28mm rotary blade. Place the **blade holder top** on top of the blade insuring that the cutout for the nut is on top as shown (Figure C).

- Locate the **M4 Nut** and insert it into the hole in the center of the **Blade Holder Top** as shown in figures D and E below (note that the Blade Holder Top will hold the **Nut** in position so you don't need extra tools for assembly):

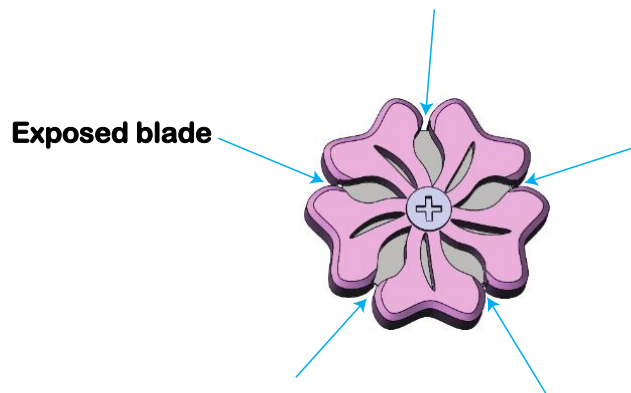

- Place your thumb on the nut to hold it in place while you turn the assembly over. While holding the assembly together with one hand, insert the screw into the Blade Holder Bottom with your other hand. Use a Phillips screwdriver to tighten the screw into the nut as seen in figures F and G above.

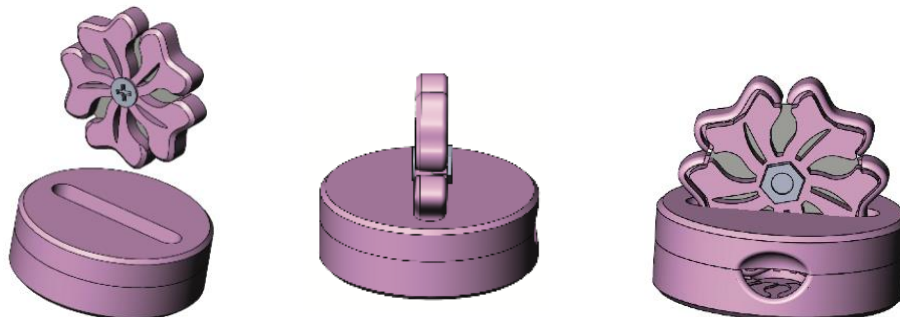

## Using the BladeSaver Thread Cutter

To use the **BladeSaver**:

- Remove the **BladeSaver** from its case. Note that there are 5 places that the rotary cutter blade is exposed so you have 5 places to cut your thread:

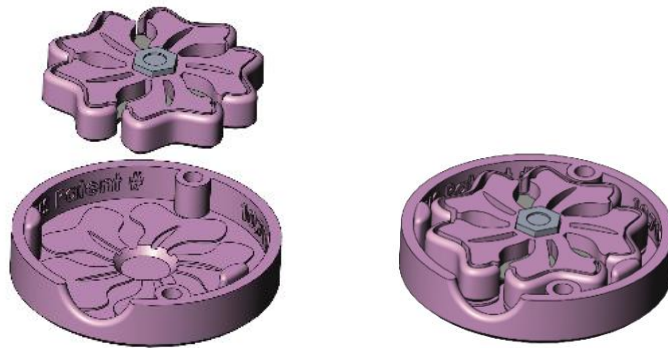

- Put the **Case Top** back onto the **Case Bottom** and position it with the slot pointing towards you. Hold the **BladeSaver** over the slot and turn it so one of the petals of the flower is parallel to the slot and press it in place. Note: make sure that you position one of the exposed areas of the blade straight up for easiest use (see diagram on the right below).

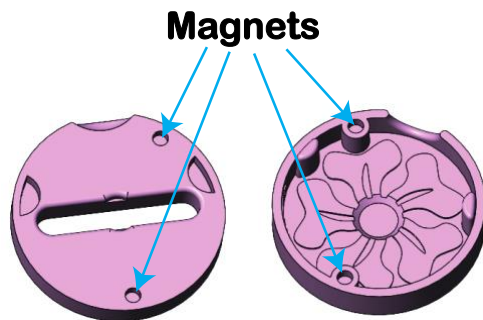

3. You are now ready to cut apart your chain pieced blocks. You can also use it to trim any long threads from the edges of your blocks.

To close the **BladeSaver**:

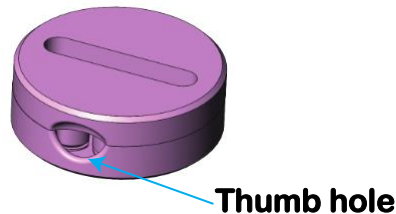

1. When you are ready to pack up your **BladeSaver**, place one hand on the **BladeSaver Case** to hold it in place and carefully pull up on the **BladeSaver** to remove it from the top of the case.
2. Open the case and note that there is a picture of the **BladeSaver** flower inside. This is to help you line up your **BladeSaver** so it fits perfectly in its case.

3. The case has 4 magnets in it to keep it securely closed while traveling to class (the magnets also help keep the case closed during use).

4. Also note that there are thumb holes in the top and bottom of the case. They make it easier to open the case, and they also make it easier to see how to align the case so the magnets and tabs snap into place.
